## DETAILED ACTION

### *Response to Arguments*

Applicant's arguments filed May 30, 2006 have been fully considered but they are moot in view of the new ground(s) of rejection prompted by applicant's amendment.

### *Claim Rejections - 35 USC § 103*

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 31-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carlucci ('299) in view of Luizzi ('291).

With respect to **Claims 31,32,35**: Carlucci teaches an absorbent article having first and second transverse edges longitudinally opposed to one another, transversely opposed side edges, a liquid-pervious topsheet, a liquid-impervious backsheet and an absorbent core therebetween. The absorbent core comprises a fluid distribution layer overlying a hydrogel material, which is capable of being produced and integrated in coating form. Carlucci teaches that all components of the article are transparent.

Carlucci teaches a transparent conventional adhesive, which encompasses hot melt adhesive, but does not teach that the absorbent core contains said adhesive. Luizzi teaches an absorbent hot melt adhesive composition also comprising a liquid-absorbing hydrogel polymer. Since the adhesive is both capable of acting as an adhesive and is absorbent, it provides a dual function making a thinner article possible, therefore it would be obvious to one of ordinary skill in

the art to modify the hydrogel material taught by Carlucci to be further comprised of hot melt adhesive and a liquid-absorbing hydrogel polymer as taught by Luizzi.

With respect to **Claim 33**: The absorbent core comprises a fluid distribution layer overlying a hydrogel material, i.e. said distribution layer is a separating layer is disposed between the absorbent material and the topsheet, wherein said separatinglayer is also transparent.

With respect to **Claim 34**: Carlucci teaches that the absorbent core is comprised of 100% transparent absorbent gelling material. ('299, ¶ 0045)

With respect to **Claim 36**: Carlucci teaches that the light transmittance of the article is greater than 40%. ('299, ¶ 0015)

With respect to **Claim 37**: Carlucci teaches that the absorbent core is 0.1-18 mm thick, therefore substantially all fibers that are suitable for said fibrous layer with a thickness consistent with the thickness of the core would form a fibrous layer with a denier in the range of 1.5-15 dpf.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
